

Arqies (Name Changed for Privacy)

Portfolio: <https://arqies.com>
Contact: contact@arqies.com

Summary

Self-taught software engineer with hands-on experience in Python, web development (Django, JavaScript, React), automation, and multimedia programming. Skilled in delivering cross-platform solutions, automating workflows, and leveraging digital platforms for content promotion. Continuously learning new technologies, frameworks, and industry trends to expand expertise and drive innovative projects.

Technical Skills

- Programming Languages: Python, JavaScript, HTML, CSS, Rust (in progress), Julia (in progress)
 - Frameworks & Libraries: Django, React, Kivy, OpenCV, Node.js, Tailwind CSS
 - Tools: FFmpeg, Gradle, Buildozer, Kdenlive, Git, Discord API (bot development)
 - Platforms: Android (via Python/Kivy), Web (full-stack)
 - APIs: ChatGPT, Discord, Shutterstock
 - Other: Video creation & editing, Automation, Web scraping
-

Education & Certifications

- Self-taught software engineering and continuous self-directed learning in advanced technologies
 - CS50's Web (HarvardX) (Completed 2025)
-

Projects (Curated)

- **Automated AI-Powered News Video Generator** 2023
 - Developed an automated workflow to fetch news from BBC, generate scripts with ChatGPT API, retrieve stock footage, and auto-produce news videos.
 - Utilized Python for backend automation.
 - **Portfolio Website** 2023-Present
 - Designed and maintain arqies.com showcasing projects, skills, and professional growth.
 - Built with Node.js, React, and Tailwind CSS.
 - **FFmpeg Kit for Python Port** 2022-2023
 - Ported Java FFmpeg kit (Android) to Python for Kivy/Buildozer application development.
 - Developed expertise in Gradle plugin creation and repository management.
-

All Projects (Sorted by Year)

- **Portfolio Website** 2023-Present
 - Designed and maintain arqies.com showcasing projects, skills, and professional growth.
 - Built with Node.js, React, and Tailwind CSS.
 - Deployed to Vercel and Github Pages..
- **CS50's Web Projects (HarvardX)** 2025
 - Completed 6 major web development projects using Django, Python, HTML, CSS, and JavaScript.
 - Final project: URL Shortener.
 - Other projects: E-commerce/shopping platform, collaborative Wiki, social media app, and Google.com CSS-only clone.
- **FFmpeg Kit for Python Port** 2022-2023
 - Ported Java FFmpeg kit (Android) to Python for Kivy/Buildozer application development.
 - Developed expertise in Gradle plugin creation and repository management.
- **Automated AI-Powered News Video Generator** 2023
 - Developed an automated workflow to fetch news from BBC, generate scripts with ChatGPT API, retrieve stock footage, and auto-produce news videos.
 - Utilized Python for backend automation.
- **Hand Tracking & Gesture-Control Automation** 2023
 - Implemented real-time hand tracking and gesture-based desktop automation with OpenCV.

- Enabled desktop command execution via custom gestures.
 - **YouTube Content & Promotion 2023**
 - Created and promoted 10+ YouTube Shorts (5k+ views) and 25+ shorts (1k+ views) utilizing trending algorithms.
 - Produced tutorials and showcases using Kdenlive.
 - **Discord OS Command Bot 2022-2023**
 - Built a Python-based Discord bot for secure OS command execution.
 - Integrated with Discord Bot API for real-time remote automation.
-

Additional Experience

- Strong self-driven learning and adaptation to new frameworks, languages, and technologies.
- Passion for automation, AI/ML workflows, and continuous improvement.
- Experience in professional software engineering and web development projects.
